NCast introduces Matterhorn lecture capture software update for Its robust line of video recorders

Sunnyvale, CA January 2012. NCast, an innovative leader in presentation capture and IP streaming, is proud to announce the Introduction of its video recorder / capture agent software update for the open source Matterhorn Lecture Capture Server.

The update will allow for unique and specialized communication between current and future NCast video encoders and the Matterhorn Video Management Server. This tight integration will enable the capturing tool to understand what the server needs to accomplish its goal to provide robust and failsafe lecture capture. Features such as: encoder registration and status, file upload and ingest, Scheduling, and confidence monitoring can all be set up through a unique interface designed into the NCast products.

"We are very pleased to offer the Matterhorn community a world-class encoder that works seamlessly with the open-standards architecture of the server. We have had many requests to provide this functionality in our product line, and with this release we foresee a strong growth in production-ready Matterhorn systems". Said Dr. Hank Magnuski, CEO of NCast.

About NCast. Headquartered in Sunnyvale California., NCast Corporation provides industry-leading solutions for capturing, distributing and archiving high-resolution, mixed media content, including rich-media presentations, high-resolution graphics and more. NCast delivers reliable, automated, simple to use presentation products for live and recorded streaming in the Education, Medical, Government and House of Worship markets.
